Fan efficiency shall be minimum 75%  The cost shall be included lifting shifting of each equipment material with all necessary arrnagement. Also, it shall be included the cost of scaffloding required for Installation of such material equipment.  No 1 85400  FRESH AIR FAN WITH MERV 8	1.1	LSAHU 2000 4.2 25 4.6	Nos	1	1	178000
SITC of Cabinet type Ventilation fan with Centrifugal Blower, Belt Direct Drive, Statically Dynamically Balanced, Backward Curved Impeller, Speed regulator, Dunlop Anti-Vibration Pads, etc. Motor should be TEFC squirrel cage, IP 55 rating with Class F Insulation, suitable for 3phase, 415volts, 50th; power supply. Sound level should be 65dB @ 3mtr distance. MERV 8 G4 pleated pre-filters should be made of 100% synthetic media to capture common airborne contaminants as per ASHRAE Standard 5.2. Fan shall be BMS compatible. Power will be provided 5 ft away from fan and necessary control wiring with plug will be provided by AC contractor. (Vendor to crosscheck static pressure calculation)  Make Kruger Nicotra Systems Air EXHAUST FAN WITH OUT OF STREAM MOTOR  Note  Fan outlet velocity - 1600 FPM  All cabinet fans should have plenum section.  Fresh air fan should have plenum section.  Fresh air fan should be provided by AC contractor shall submit static pressure calculation for all above units to Client Consultant for their approval. Also, the total static drops across the systems shall cover the overall length from suction discharge to grille (inside the outlet).  Any change in motor IP or coil selection shall be made at no extra cost to client.  Fan efficiency shall be minimum 75%  The cost shall be included lifting shifting of each equipment material with all necessary arrnagement. Also, it shall be included the cost of scaffloding required for Installation of such material equipment.  No 1 85400  FRESH AIR FAN WITH MERV 8						
SITC of Cabinet type Ventilation fan with Centrifugal Blower, Belt Direct Drive, Statically Dynamically Balanced, Backward Curved Impeller, Speed regulator, Dunlop Anti- Vibration Pads, etc. Motor should be TEFC squirrel cage, IP 55 rating with Class F Insulation, suitable for 3 phase, 415volts, 50its, power supply. Sound level should be 65dB @ 3 mit distance. MENV 8 de pleated pre-filters should be made of 10% synthetic media to capture common airborne contaminants as per ASHRAE Standard 52.2. Fan shall be BMS compatible. Power will be provided 5 ft away from fan and necessary control wiring with plug will be provided by AC contractor. (Vendor to crosscheck static pressure calculation) Make Kruger Nicotra Systems Air EXHAUST FAN WITH DUT OF STREAM MOTOR Note Fan outlet velocity - 1600 FPM All cabinet fans should have plenum section. Fresh air fan should to have 6mm thick synthetic media washable filter with framework. Contractor shall submit static pressure calculation for all above units to Client Consultant for their approval. Also, the total static drops across the systems shall cover the overall length from suction discharge to grille (inside the outlet). Any change in motor HP or coil selection shall be made at no extra cost to client. Fan efficiency shall be minimum 75% The cost shall be included lifting shifting of each equipment material with all necessary arrnagement. Also, it shall be included the cost of scaffloding required for Installation of such material equipment.  No 1 85400						
suitable for 3 phase, 4 15volts, 50hz power supply. Sound level should be 65dB @ 3mtr distance.
