To,
Dear Sir/Madam

Marble Polishing Proposal– One Time

Sr. No.	Description	Unit	Area	Rate	Cost
A	Mirror Finish Marble Polishing				
	1. Regular marble polishing (grinding, honing, polishing, and buffing)	Sq. Ft.	1.00	28.00/-	28.00
	2. Marble crack filling				
Value Of Work Contract					28.00
GST 18% Extra					
Rupees –Twenty Eight Only					

Terms & Conditions

- Above Quote includes Mechanical Products, Consumables and Manpower.
- Client must ensure availability of safe storage space and easy accessibility to electricity and water.
- Execution of work will be undertaken only after an official contract is mutually agreed & signed by both the parties.
- 50% Payment of total billing amount need to be pay in advance.
- GST / any other tax or levy, if applicable, shall be charged on actual.
- Rates will be revised in case of increase or change in scope of work.
- Invoice will be raised after completion of awarded work; it would be the responsibility of the client to reimburse the same within **15 (Fifteen)** days of receiving the invoice.
- We shall not be liable for the delay in adherence to time schedules or performance of duties in case of force majeure conditions occurring during the contract period.
Such force majeure is as follows:
 - a. Earthquake, epidemic, flood, fire etc. or any other forms of natural calamity.
 - b. Any ordinance of the government such as emergency etc.
 - c. Any other conditions beyond the control of the supplier or the owner.

➤ Marble Polishing Procedure - Explained

-
- **Grinding:** It is most powerful and dynamic step, also known as lippage removal or flattening. Even new installed marble floor can have some tiles be upper or lower of floor flatness. This step removes all ledges, roughness and brings flatness to marble floors. Also, this step can remove the deepest scratches and stains.
-
- **Honing:** is the step of floor restoration. It provides smoothing to the marble floor with industrial diamonds, which brings up more shine to the marble. Honing will also remove scratches, stains and give a more uniform appearance. In some cases, honing is all that is needed to get you stone looking spectacular again.
-
- **Polishing:** It gives semi-shining or shining effect to the marble floor. Polishing is done by industrial diamonds, but smaller graded, than while honing. For marble floors in good condition a polishing can be enough to bring back the shine.
-
- **Buffing or Crystallization:** Crystallization is a method of marble floor finishing. It brings “mirror like” shine by chemical reaction on the surface of marble. Crystallization also creates micro film on the surface of marble, which is more solid and durable and helps to preserve the color and the brightness of the marble. Crystallization is a very good method for regular stone maintenance. Our marble floor restoration polishing treatment uses diamond pads to grind down the surface of your marble, bringing out a fresh layer of stone. Then we use successively finer grade pads to bring the surface of your marble to a “mirror like” shine.
- Apart from this marble also needs to be regularly buffed using single disc machines and pads for regular upkeep and maintenance.
