Server shifting

We would first like to thank you for using our product.

They require our assistance for transferring biometric applications and netxs from current server to VM server.

Cost for above work would be Rs. 65,000 + GST.

Note:

- Client has to keep VM & DB server ready for installation.
- Administrator / SQL SA rights would be required at time of installation.
- Latest backup will be taken from current server & will be restored on VM server.
- Access manager services from old server has to stop & will not be operational.
- Access manager same version will be installed on VM server.
- We recommend to keep VM server IP same as current server IP but since application is moving on VM, server IP will be different.
- Since application server IP will be different, we need to change server IP in all biometric devices. For this we would require biometric device master authentication for login into device & changing server IP by your team.
- Client has to ensure new VM server & biometric device are there in network.
- Port used are 7331 & 7332. This ports should be open.
- Client need to take necessary permission & approval to carry of above activity

Payment terms:

100% in advance.

Hope the above is in line with your expectation.

You're truly,

Premal Shah
